

1.1 Creating a project

Preconditions:

- You are logged into the Redouble AI system
- You have permissions to create projects

Steps:

1. Click the "+" icon button (New Project) in the top toolbar

2. In the "New Project" dialog window, fill in the required fields:
 - **Name** — enter the project name

- **Description** — describe the purpose of the project

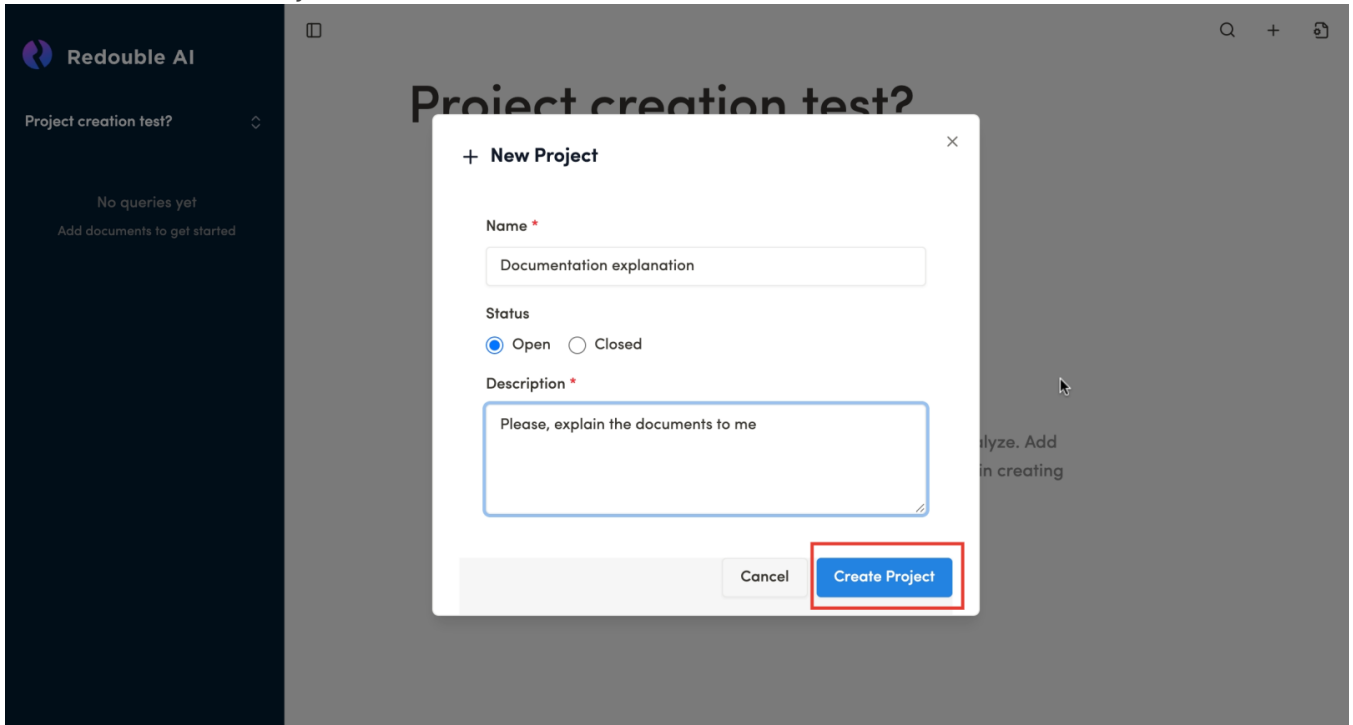

The screenshot shows the Redouble AI interface with a 'New Project' dialog box open. The dialog box has a title bar with a plus sign and a close button. It contains three main sections: 'Name' with a text input field, 'Status' with radio buttons for 'Open' and 'Closed', and 'Description' with a text area. The 'Name' field is highlighted with a red border. The 'Status' is set to 'Open' and the 'Description' field is empty. At the bottom, there are 'Cancel' and 'Create Project' buttons.

3. Select the project status:

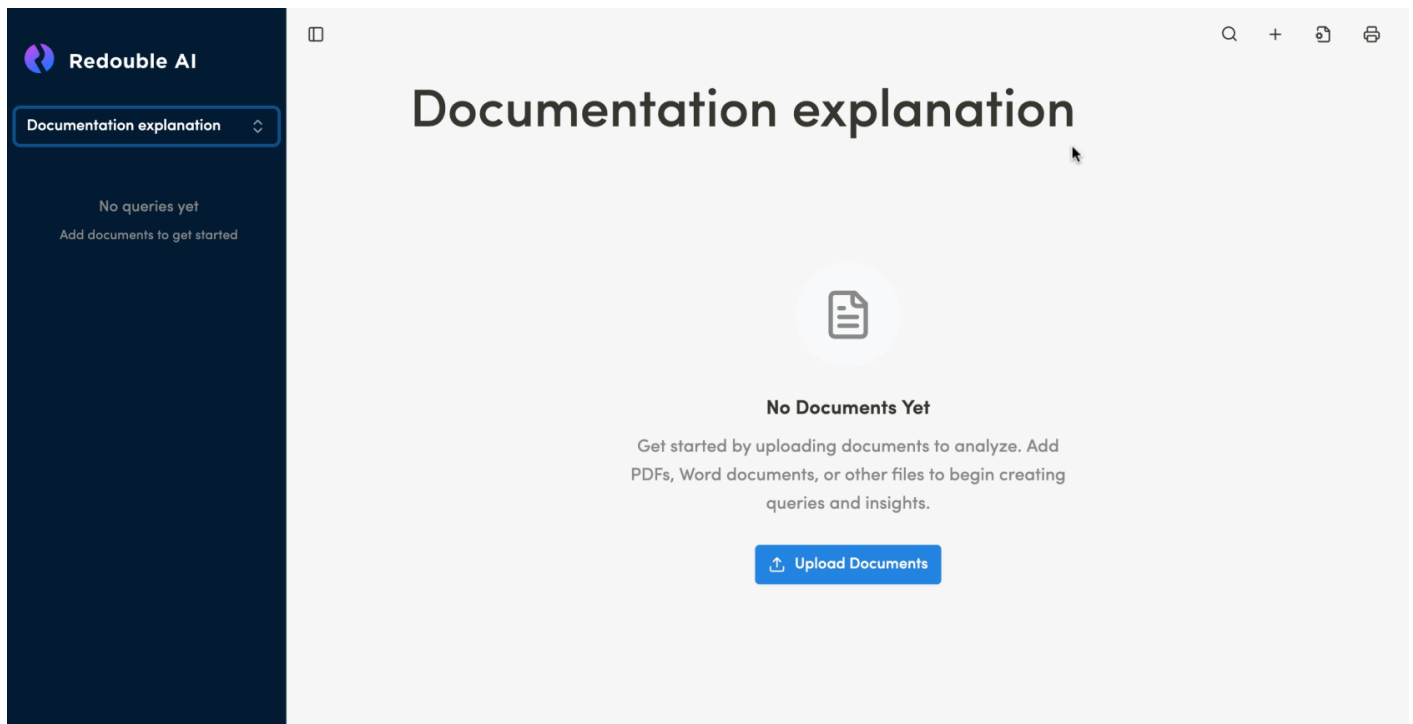

- **Open** (default) — project is active
- **Closed** — project is completed

This screenshot is identical to the one above, but with a red border highlighting the 'Status' section. The 'Open' radio button is selected, and the 'Closed' radio button is unselected. The 'Name' field and 'Description' text area remain unchanged.

4. Click the "Create Project" button

Result: The project is created and automatically opened for work. You will be redirected to the project's main page where you can add documents and create questions for analysis.

Revision #10
